CARD GUIDE THAT COMPRISES CARD GUIDE PORTIONS THAT SERVE TO GUIDE A CIRCUIT BOARD INTO A CHASSIS

ABSTRACT

A card guide of an apparatus in one example comprises a plurality of card guide portions that serve to guide a circuit board into a chassis. The plurality of card guide portions comprise a first card guide portion and a second card guide portion. The first card guide portion serves to guide the circuit board substantially along a first direction during engagement of the circuit board with the first card guide portion. The second card guide portion serves to guide the circuit board substantially along a second direction that is nonlinear with the first direction during engagement of the circuit board with the second card guide portion.
